

Biological Activity Of Cymbopogon Citratus Dc Stapf And

As recognized, adventure as with ease as experience just about lesson, amusement, as well as treaty can be gotten by just checking out a ebook **biological activity of cymbopogon citratus dc stapf and** afterward it is not directly done, you could admit even more nearly this life, approaching the world.

We pay for you this proper as with ease as simple exaggeration to acquire those all. We have the funds for biological activity of cymbopogon citratus dc stapf and and numerous books collections from fictions to scientific research in any way. in the midst of them is this biological activity of cymbopogon citratus dc stapf and that can be your partner.

Cymbopogon citratus is a plant used in traditional folk medicine in Brazil for the treatment of nervous and gastrointestinal disturbances, and in various other countries to treat fevers (Melo et al. 2001). The volatile oil obtained from fresh leaves of this plant is widely used by the perfume and cosmetics industries.

~~Biological Activities of Essential Oil Obtained from ...~~

From the present study, it could be seen that ethanolic extract of *Cymbopogon citratus* exhibits antibacterial activity against *S. typhi* while the growth of this microbe (*S.typhi*) was affected by the extract. *Cymbopogon citratus* is a good source of carbohydrate, crude fibre, and nutritive elements.

File Type PDF Biological Activity Of Cymbopogon Citratus Dc Stapf And

Cymbopogon citratus (DC) Stapf. (Lemon grass) (Graminaceae) is a source of essential oil widely used as a component of ethnopharmaceuticals in tropical and subtropical countries. Among a range of essential oils isolated from different plant sources, lemongrass oil exhibit highest antioxidant activity and protect lipids peroxidation.

The bacterial resistance has created a major health issue worldwide whereby the pathogens becoming resistant even to the most recently approved antibiotics. Essential oils have showed many biological activities such as antibacterial, antifungal, antiviral, antioxidant and insecticidal. This study was conducted to analyse the chemical composition of the essential oils of *Cymbopogon citratus* and *Cymbopogon nardus*; and to study their antibacterial activities in alone and in combination. Essential oils obtained by steam distillation were analysed by gas chromatography-mass spectrometry (GC-MS); while the antibacterial activity of the essential oils were evaluated against five bacteria namely *Enterococcus faecalis* ATCC 14506, *Staphylococcus aureus* BAA-1026, *Bacillus Subtilis* ATCC 11774, *Escherichia coli* ATCC 10536, and *Salmonella typhimurium* ATCC 14506 by using disk diffusion and broth microdilution methods. To determine the antibacterial effects of essential oils in combination, the broth microdilution checkerboard method was utilized. From the results, it is observed that the major compounds contained in essential oils of *Cymbopogon citratus*, and *Cymbopogon nardus* were geranial (33.01%) and elemol (44.14%), respectively. The result of antibacterial activity indicated that *Cymbopogon citratus* possessed a good and wide spectrum of antibacterial activity against all the tested bacteria; whereas *Cymbopogon nardus* only showed stronger antibacterial activity against Gram-positive bacteria than Gram-negative bacteria. Gram-positive bacteria were more sensitive to the investigated oils than Gram-negative bacteria; in which *Staphylococcus aureus* was the most sensitive strain tested, with the lowest MIC value (0.47?l/ml). The *Cymbopogon nardus* had showed greater bactericidal activity against all Gram-positive bacteria compared to *Cymbopogon citratus*. The result of antibacterial activity of essential oils in combination showed that the combination were less effective compared to when each of the essential oils was used individually; the antagonism responses were obtained against all the tested bacteria except for *Enterococcus faecalis* bacteria which showed indifference response. The results presented may suggest that the essential oils of *Cymbopogon citratus* and *Cymbopogon nardus* could be employed as a potential source of antibacterial ingredients for food and pharmaceutical industry; however, it is recommended for not mixing these both essential oils as they have not given positive results for antibacterial activity.

When enjoying a southeast asian soup or cup of herbal tea, we are really savoring the flavor of lemongrass. Similarly, the sweet aroma of mosquito-repelling lotions comes from the citronella oil present in them. Fine perfumes, candles, and herbal pillows with the pleasing smell of rose are often in fact scented with palmarosa. Providing an in-depth look at their history and production, *Essential Oil Bearing Grasses: The genus Cymbopogon* provides a comprehensive review of these economically important grasses. A detailed examination of chemical constituents and market trends, the book explores the cosmetic, medicinal, and nutritional uses of the plant. It covers the botany, taxonomy, chemistry, and biogenesis of the oils, and their extraction and analytical methods, biotechnology, storage, legislation, and trade. Highlighting industrial uses for the grasses in this genus, the book also includes coverage of the physiological and ecophysiological considerations. It presents a comprehensive overview of most of the cultivated and wild species of cymbopogons. Featuring contributions from a team of

File Type PDF Biological Activity Of Cymbopogon Citratus Dc Stapf And

international experts, the book describes the considerable ethno-botanical, phytochemical, and pharmacological knowledge associated with the multidimensional uses of the oils. It provides a complete industrial profile that includes market size, geographical sources, export and import data, and industry uses. Its pages offer an invaluable resource for research, cultivation, marketing, or product development of Cymbopogon.

Antibiotics represent one of the most successful forms of therapy in medicine. But the efficiency of antibiotics is compromised by the growing number of antibiotic-resistant pathogens. Antibiotic resistance, which is implicated in elevated morbidity and mortality rates as well as in the increased treatment costs, is considered to be one of the major global public health threats (www.who.int/drugresistance/en/) and the magnitude of the problem recently prompted a number of international and national bodies to take actions to protect the public (http://ec.europa.eu/dgs/health_consumer/docs/road-map-amr_en.pdf: http://www.who.int/drugresistance/amr_global_action_plan/en/; http://www.whitehouse.gov/sites/default/files/docs/carb_national_strategy.pdf). Understanding the mechanisms by which bacteria successfully defend themselves against the antibiotic assault represent the main theme of this eBook published as a Research Topic in Frontiers in Microbiology, section of Antimicrobials, Resistance, and Chemotherapy. The articles in the eBook update the reader on various aspects and mechanisms of antibiotic resistance. A better understanding of these mechanisms should facilitate the development of means to potentiate the efficacy and increase the lifespan of antibiotics while minimizing the emergence of antibiotic resistance among pathogens.

Before the concept of history began, humans undoubtedly acquired life benefits by discovering medicinal and aromatic plants (MAPs) that were food and medicine. Today, a variety of available herbs and spices are used and enjoyed throughout the world and continue to promote good health. The international market is also quite welcoming for MAPs and essential oils. The increasing environment and nature conscious buyers encourage producers to produce high quality essential oils. These consumer choices lead to growing preference for organic and herbal based products in the world market. As the benefits of medicinal and aromatic plants are recognized, these plants will have a special role for humans in the future. Until last century, the production of botanicals relies to a large degree on wild-collection. However, the increasing commercial collection, largely unmonitored trade, and habitat loss lead to an incomparably growing pressure on plant populations in the wild. Therefore, medicinal and aromatic plants are of high priority for conservation. Given the above, we bring forth a comprehensive volume, "Medicinal and Aromatic Plants: Healthcare and Industrial Applications," highlighting the various healthcare, industrial and pharmaceutical applications that are being used on these immensely important MAPs and its future prospects. This collection of chapters from the different areas dealing with MAPs caters to the need of all those who are working or have interest in the above topic.

Medicinal Spices and Vegetables from Africa: Therapeutic Potential against Metabolic, Inflammatory, Infectious and Systemic Diseases provides a detailed look at medicinal spices and vegetables that have proven safe-and-effective for consumption and the treatment of diseases, including infectious diseases, cardiovascular disease, and cancer. It provides pharmacological evidence, such as the latest information related to efficacy and safety data, in vitro and in vivo studies, clinical trials, and more, to illustrate the use of these spices and vegetables as both palliative and alternative treatments with the goal of furthering research in this area to produce safer and more effective drugs. Provides scientific evidence for the potential of medicinal spices and vegetables used in Africa to fight metabolic, inflammatory, and

File Type PDF Biological Activity Of Cymbopogon Citratus Dc Stapf And

infectious diseases Includes a review of the latest methods used to investigate the effects of medicinal plants in the treatment of disease Offers an updated resource for students sand scientists in the fields of pharmaceutical science, pharmacognosy, complementary and alternative medicine, ethnopharmacology, phytochemistry, biochemistry, and more

Biological activity of some local medicinal plants including Ocimum sanctum, Mentha arvensis, Cymbopogon citratus, Decaspermum montanum, Eugenia aromatica, Curcuma domestica, Curcuma viridiflora and Zingiber ottensii was investigated. The volatile fraction of some of the plants was isolated and the major components were characterized by gas chromatography and sepectroscopic methods. The fungicidal, bactericidal and insecticial activities of some of the extracts and their ability to inhibit seed germination were studies. [Authors' abstract].

Phytochemicals are the individual chemicals from which the plants are made and plants are the key sources of raw material for both pharmaceutical and aromatic industries. the improved methods for higher yield of active compounds will be the major incentive in these industries. To help those who are involved in the isolation of compounds from plants, some of the essential phytochemical techniques are included in this book. The theoretical principles of various instruments, handling of samples and interpretation of spectra are given in detail. Adequate chemical formulas are included to support and explain various structures of compounds and techniques. The book will prove useful to students, researchers, professionals in the field of Plant Physiology and Pathology, Pharmaceutical and Chemical Engineering, Biotechnology, Medicinal and Aromatic Plants and Horticulture.

This book has been prepared to embody the major and efficient applications of the different duties and roles of grasses in our life, as well as offered a solid concept for this kind of science. The book aims to illustrate various ideas, methods and how it is treated in the agronomic process for different forms of grasses in human life.
