A project safety master plan should be developed during the planning stage of the project. It is an overarching plan which will inform and guide the development of subordinate safety plans for design, construction and commissioning of the facility/structure. Principle 2: Promote design for safety. Specify safety requirements in project brief

Therefore, a principle of structures is that they be designed to maintain a state of equilibrium; resisting external loads without moving. The study of the causes and effects of stationary forces acting on rigid objects is statics. When a structure is stationary or in equilibrium, it is a 'static body'.

Prevention through design, also called safety by design usually in Europe, is the concept of applying methods to minimize occupational hazards early in the design process, with an emphasis on optimizing employee health and safety throughout the life cycle of materials and processes. It is a concept and movement that encourages construction or product designers to "design out" health and safety risks during design development. The concept supports the view that along with quality, programme and c
