A hands-on, visual learning experience for physical geology

"Earth Science opens with the Big Bang and then introduces basic plate tectonics, so students immediately experience the "action" of the Earth as a system. Learning objectives are identified at the beginning of each chapter and assessed at the end through questions that range from simple review to thought-provoking applications. Additionally, every chapter contains "How Can I Explain" features, which provide simple, hands-on projects that illustrate a key concept. The text's narrative art program explains earth science concepts by breaking down processes into a series of steps. Brief annotations embedded throughout the figures explain each phase. Features such as "What a Scientist Sees," "Science Toolbox," "A Deeper Look," "How Can I Explain," and "Putting Earth Science to Use," present real-world photos alongside drawings that simplify and amplify visual information, while "See For Yourself" features identify sample sites in Google Earth. Throughout, the authors' narrative approach to the content and innovative integration of new visual and interactive resources guides students to a clearer, more applicable understanding of the entire Earth System"--

Whether hiking along a mountain trail, driving down a highway, or making a decision about their energy usage, instructors want their students to see and assess the physical world they live in with more informed eyes. Through the most contemporary and applied text; the most vibrant visuals; and the most hands-on learning resources, Earth Science, Second Edition gets students leaving the class with a richer understanding of the science behind the physical world around them, and why it matters in their everyday lives.

The book introduces tourism earth-science as a new scientific discipline by applying the principles of earth-science in the study of natural and human tourism resources. It involves studying the geo-scientific characteristics of these tourism resources through surveys, evaluation and aesthetic value assessment. It also discusses about the principles behind geopark establishment and management. It is an important publication providing direction for geopark and tourism developments in China. The book is a tool for geological heritage survey, assessment and research. It can also be used to assist planning of geopark, national parks, heritage protection and scientific interpretation. It is a valuable teaching material for teachers and students of geoscience and tourism as well as providing useful guidance for geopark managers and tour guides in their operation. In addition, the book also offers scientific knowledge of the surrounding natural and cultural landscapes to the public and the general visitors.

Dynamic labs emphasize real-world applications

This book contains a selection of articles from The 2014 World Conference on Information Systems and Technologies (WorldCIST'14), held between the 15th and 18th of April in Funchal, Madeira, Portugal, a global forum for researchers and practitioners to present and discuss recent results and innovations, current trends, professional experiences and challenges of modern Information Systems and Technologies research, technological development and applications. The main topics covered are: Information and Knowledge Management; Organizational Models and Information Systems; Intelligent and Decision Support Systems; Software Systems, Architectures, Applications and Tools; Computer Networks, Mobility and Pervasive Systems; Radar Technologies; Human-Computer Interaction; Health Informatics and Information Technologies in Education.

This book explores the geographical, geomorphological, ecological, touristic and socioeconomic aspects of natural heritage, argues for the dynamic conservation of that heritage and explains its key characteristics, promotion, conservation and management to achieve sustainable development goals. Emerging concepts such as geodiversity, geographical heritage sites, geomonuments, geoparks and geotourism are increasingly being used by conservationists. At present, the development of geoparks is a major global theme involving the application of geosciences to promote the inclusive growth of society and the protection and conservation of our unique geoheritage. Currently, there are 147 UNESCO global geoparks across 41 countries, in addition to a number of national-level geoparks. Pursuing a holistic approach towards such sites will sensitise the general public to the need for geoconservation of significant geosites and promote it through geotourism. It is a crucial issue, as various countries around the world are eager to develop their geoparks and are working for the conservation of geoheritage sites at the national level. This unique book gathers contributions from 15 countries in the form of case studies analysing the realities on of geographical heritage, geoparks and geotourism. The respective chapters address the role of geoparks as essential tools for education, recreation and nature conservation. Given its scope, the book offers a valuable guide for geoscientists, planners, policymakers, civil society and anyone concerned about the conservation of geoheritage sites and geoparks for a sustainable future Earth.

This book adopts a collectivist perspective on special interest tourism consumption, bringing together research on 'special interest tourism' and 'niche tourism' as well as more recent research into the interdisciplinary applications of the sociological concept of neo?tribes. It promotes a shift in perspective away from special interest tourism understood as a sum of similarly motivated individuals, to a collective view of special interest tourists who share common characteristics (e.g., shared values, beliefs and mutual interests) and group structures. This approach provides a better understanding of groupings that are not unified by a common tourism motivation, but brought together by otherwise conditioned commonalities in actual behavior triggered by supply-side contexts (e.g., Airbnb). The book considers tourism micro?segments as consumer tribes (i.e., as symbolic communities) in which individuals are embedded and loosely bound together. As there is limited research on the collectivist perspective on special interest tourism consumption, in the first part the book's conceptual/theoretical discourse contributes to a better understanding of 'groupings' in tourism behavior but also collectives that are not unified by a common tourism motivation. Presenting international examples, the book explores in Part 2 the group culture of a range of tourist tribes by describing emerging tourism micro-segments, identifying shared identities, and analyzing their collective mechanisms.

For the last 20 years there has been a growing interest in the geosciences for topics related to geoheritage: geoconservation, geotourism and geoparks. Geoheritage: Assessment, Protection, and Management is the first and only reference book to cover these main topics as well as the relationship of geoheritage to other subjects such as landscapes, conservation, and tourism. The book also includes methodologies for assessment, mapping, and visualisation, along with case studies and colour images of some of the most important global geosites. This book is an essential resource for geoscientists, park and geopark managers, tourism and regional planning managers, as well as university students interested in geoheritage, geosites, geomorphosites, geoconservation, and geotourism. It also includes critical information on UNESCO's Global Geoparks, World Heritage and Biosphere Reserve sites, national parks and protected areas in general, land-use planning and nature conservation policies, and in the general contribution of geodiversity for sustainable development. Winner of the 2019 AESE Award for Outstanding Publication Written by a panel of 46 authors from 14 countries in all continents Based on conceptual, methodological, and applied research carried out by academics and practitioners Includes 160 colour images and maps of geoheritage sites Features six case studies from sites in Africa, Asia, Australia, Europe, North America and South America

In the course of the hundreds of Rio Chama rafting trips that we've logged during the last 30 years, none of us has ever had a bad trip. Such is the magic of the Rio Chama. No matter the weather, the water level, the season, the crowded Big Eddy boat ramp on a blistering Sunday afternoon, or even the coffee forgotten at home, the Rio Chama remains "The People's River." Its stunning beauty, plus its exceptional camping, user-friendly whitewater, and mostly predictable flows, combine to create one of the Southwest's premiere, multi-day, river running experiences.The spectacular, towering canyon walls of the Wild & Scenic section through the remote Chama River Canyon Wilderness is New Mexico's own "Grand Canyon." The geology of the Rio Chama is so exceptional that this river is ideally suited for a river guide with a geological theme. And so, following the release of the Rio Grande geologic river guide in 2011, we turned our (part-time) attention to the Rio Chama. Although most Rio Chama recreation is focused on the El Vado to Big Eddy stretch, thedecision was easily made to include the entire boatable section, from the highlands in Colorado to the confluence with the Rio Grande, as each section of the river displays its own visual spectacles and assortment of

adventures. Plus, the geology is magnificent and diverse along the entire length of the river.
