A functional system that includes an ecological community of organisms together with the physical environment, interacting as a unit. Ecosystems involve both biotic (living) components and abiotic (nonliving, physical) components (Fig. 1). Also termed ecological systems, ecosystems are characterized by a flow of energy through food webs, production and degradation of organic matter, and transformation and cycling of nutrient elements.

around their schoolyard and record their observations in a nature journal. Students thentake a virtual trip down the Cape Fear River and discover different types of aquatic and terrestrial ecosystems.

5th Grade Life Science: Ecosystems Unit

Most of the plants and animals, such as algae, plankton, fish, and whales, live near the surface of the ocean where sunlight reaches. Some organisms exist deep below the ocean surface where sunlight cannot penetrate. Most of these animals scour the ocean bottom for organic matter that sinks. Some, however, live near hot vents in volcanic areas.

Ecosystems - Jason's classroom
